

The eco design aims at reducing the environment impact of lighting products, in particular energy consumption, all along their life cycle.

The Commission Regulation N° 874/2012, supplementing Directive 2010/30/UE concerning Energy Labelling of electrical lamps and luminaires, requires to communicate on the range of energy-efficiency classes according to the model below:

The Commission Regulation N° 245/2009, supplementing Directive 2005/35/CE, requires to inform on gear / driver energy class in order to assist customers in case of component's change.

TRATO-TLV group recommends to replace gear / driver provided in the luminaire with a similar energy class component.

Contact us for more information about gear / driver compatibilities:
